Communicating Risk

Why Do We Care About Communicating Risk?

- Foster personal preparedness and resilience behaviors
- Foster support for community action and investments

Why is Communicating Risk Complex?

“The crux of risk communication is understanding how risk is perceived.”

– Dr. Betty Morrow

Risk = Hazard x Exposure x Probability

Interpretive Frames

Risk = Hazard x Exposure x Probability

PLUS...

- 
- A gold-colored, ornate picture frame with intricate carvings and a woven pattern. Inside the frame, on a dark blue background, is a list of three bullet points in white text.
- Experiences
 - Circumstances
 - Social and cultural norms

Feelings Influence Risk Perception and Risk Behavior

What Has Research Revealed?

- Theoretical perspectives on risk perception
- Theories and models of behavior change

Theoretical Perspectives on Risk Perception

- Psychometric paradigm
- Cultural risk theory
- Social amplification of risk framework
- Mental models approach

Mental Models

- Built over time based on experiences and social interactions
- Used as a “lens” when we get new information or are faced with a new situation
- Help us apply memory to new tasks
- BUT we tend to ignore new data that does not fit, and seek out data that confirms our model

Theories and Models of Belief and Behavior Change

- Transtheoretical model (stages of change)
- Global warming's six Americas
- Social marketing and community-based social marketing

Transtheoretical Model (Stages of Change)

Global Warming's Six Americas

Social Marketing

“The planning and implementation of programs designed to bring about social change using concepts from commercial marketing.”

- The Social Marketing Institute

- Influence behaviors and actions
- Information alone rarely changes behaviors
- Focus on decreasing barriers and increasing benefits

Community Based Social Marketing

Modified from
Fostering Sustainable Behavior, 1999,
McKenzie-Mohr and Smith

Research Findings

- Worry is a finite resource
- Confirmation bias
- Uncertainty can be hard to communicate; emphasize what is known
- Fear-based communication alone does not lead to action

Research Findings

- Optimism bias
- Refuting false statements can serve to reinforce them
- Social norms are powerful

<i>Message on Placard</i>	<i>Conversion Rate</i>
Help the hotel save energy.	16%
Partner with us to help the environment.	31%
Almost 75% of guests reuse towels.	44%
75% of the guests who stayed in this room reused towels.	49%

Research Findings

Dr. Dennis Mileti

- Department of Homeland Security study on public preparedness
- 3300 respondents

Dr. Mileti's Research

Two Factors Drive Public Preparedness

1. INFORMATION "Received" IF:

- FROM: multiple sources
- OVER: multiple communication channels
- ABOUT: what preparedness actions to take
- EXPLAINS: how actions cut losses
- THAT IS: consistent across messages

2. INFORMATION "Observed":

- CUES: seeing others take actions

Best Practices

OFFICE FOR COASTAL MANAGEMENT
NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

1. Consider Your Goal

- Information and education
- Behavior change and protective action
- Disaster warnings and emergency information
- Joint problem solving and conflict resolution

2. Know Your Audiences

- Values, interests, attitudes, and beliefs
- Current perception of risk, past experiences
- Preferred information sources
- Barriers and benefits to taking action

3. Speak to Your Audiences' Interests

4. *Engage* Your Audiences, Start a Dialog

5. Use Trusted Sources
