

Security Features on Interagency Passes

The features indicated below were added to all Interagency Passes (except 4th Grade Pass) printed and distributed beginning in 2017. These features require highly specialized equipment to duplicate accurately. Please note that this does not change the processes and procedures for issuing or verifying pass ownership. They are only to be used to identify possible counterfeit passes.

Foil Hologram - Use this as the primary check to verify that the pass is not counterfeit.

Micro Printing - The black micro text repeats and reads the type of pass in all UPPER CASE. The letter "a" in the text that is the third from the right is lower case. This can help identify a counterfeit pass. A 10X magnifier is needed to read this text. This is a secondary way to verify that the pass is valid and can be used if there is suspicion that the pass may be counterfeit. If a pass is duplicated or copied without using specialized production equipment, this microtext will be unreadable.

Invisible Ink - AMERICA THE BEAUTIFUL is printed in invisible ink across the front of the pass. *This text is only visible under a UV light.* This is a secondary way to verify that the pass is valid and can be used if there is suspicion that the pass may be counterfeit.
